My Columbia Earth & Environmental Engineering degree prepares me to...

Conduct measurement and control of material flows through the environment

Assess environmental impact of past, present, and future industrial activities

Analyze and design processes for remediation, recycling, and disposal of used materials

Design and conduct experiments as well as analyze and interpret data

Design a system, component, or process to meet desired needs within economic, environmental, social, political, ethical, health, and safety, manufacturability, and sustainability restraints

Function effectively on multidisciplinary teams

Identify, formulate and solve engineering problems

Communicate effectively
